Project Description

The construction of the Sandoval Way Access Road was one of the first projects to be completed as part of the \$432,000,000 BART Hayward Maintenance Complex Project. This road now connects the older maintenance complex with the new portions of the complex enabling workers and staff to easily commute back and forth whereas before, they would have to travel several miles on surface streets to travel from one complex to the other.

Other elements of work included clearing, grubbing and grading of the undeveloped land; installation of an extensive and sizeable storm drain system; aggregate base placement and compaction; asphalt roadway construction; pavement marking; chain link fence and large cantilever gate installation; and site restoration.

This project was completed on budget and ahead of schedule enabling the follow on Maintenance Complex projects to progress successfully. In addition, Sustainable Group is very proud to be part of the BART District's Big 3 initiatives, namely the Fleet of the Future, an improved train control

Excavation of roadway

Placement of storm drain system

Key Personnel Certifications
