

U.S. Coast Guard Point San Pablo, Richmond, CA

Replace Vessel Traffic System (VTS) equipment shelter

Project Overview

Sustainable Group key personnel performed on-site construction services to replace the equipment shelter, install a new emergency generator, and complete other needed repairs at the remote Point San Pablo VTS location.

Project Description

The existing Fiberglass Reinforced Plastic (FRP) equipment shelter at the remote Point San Pablo Vessel Traffic System (VTS) site was in very poor condition with a rotted floor and multiple roof leaks. This project replaced this shelter just in time, before one of the wettest winters on record for Northern California in 2017. Other elements of work for this project included extensive repairs to the earthen access road to the site, installation of concrete pads for the larger new shelter and a new emergency generator, installation of a new power pole for commercial electricity delivery, installation of new stainless steel electrical service panels, installation of expanded security fencing, and restoration of the site.

Sustainable Group key personnel self-performed all of the construction activities for this project which was brought in on budget despite a lengthy one year delay due to land lease negotiations between the Coast Guard and the land owner, Chevron. In the end, all project stakeholders were very pleased with the final product which is now being used as the configuration management standard for VTS sites throughout the Coast Guard.
