Project Description

This project performed survey and inspection functions for the entire sanitary sewer system on board U.S. Coast Guard Base Alameda through the use of modern robotic video equipment. Sustainable Group teamed with specialty contractor, Presidio Systems Inc., to perform this survey. Additional scope of work included the location of manholes and laterals throughout the base, sewer preconditioning and cleaning prior to inspection, and the physical inspection of lift stations to thoroughly assess the overall condition of the system.

Sustainable Group key personnel performed on-site construction management, safety oversight, and Quality Control/Quality Assurance for this project. This expert oversight ensured the project was completed in a timely manner and to the great satisfaction of the Coast Guard despite several differing site conditions to include nearly double the number of manholes than shown on the reference drawings. In addition, the extremely poor condition of the sanitary sewer lines along the waterfront was quickly pointed out to the Coast Guard in order to affect immediate repairs with no detrimental impact to Coast Guard operations.
