Project Description

This project corrected numerous long standing water intrusion problems at the remote U.S. Coast Guard Communication Area Master Station Pacific in Inverness, CA. The scope of work included the demolition of existing wall flashing, the installation of new copper wall flashing, the sealing of several wall penetrations, the removal of vegetation and soil adjacent to the building equipment pad, the repair of drain pipes, the cementitious waterproofing of the wall structure below a raised floor in the classified command center, as well as numerous intricate roofing repairs.

Sustainable Group key personnel self-performed the many construction aspects of this project. The project was completed on time and within budget and corrected the significant water intrusion problems this building has experienced since it was first constructed in the mid 1990's.
