Project Description

Working with joint venture partner, Terraphase Engineering, Sustainable Group key personnel excavated several locations to characterize nearly 47,000 cubic yards of material near 7th street at the Port of Oakland.

The proper characterization of this material was vital to the long term planning of this currently undeveloped parcel on the already crowded port and to fully develop feasible development options.

Sustainable Group completed this project on budget and on an accelerated timeline to meet the project delivery requirements.

About Sustainable Group
