## Project Description

The U.S. Coast Guard Station Tillamook Bay Boat House suffered significant damage during the winter of 2020. This project originally required two mobilizations with the first requiring the removal of any loosely connected roof and siding panels that if they fell would cause a serious safety situation and potential bodily injury to Coast Guard personnel. The second mobilization required the provision of all labor, materials, and equipment necessary to repair the damaged roofing/siding panels as well as the repair of loose bird netting inside the boat house. Once all of the repairs were complete, Station personnel reported that birds were still entering the netting and a third mobilization was ultimately required to repair additional netting areas to fully resolve the issue. The completed repairs have since protected the Coast Guard small boats housed inside the building until a new boat house can be constructed in the near future.

Sustainable Group key personnel performed on-site construction management, field superintendence, safety oversight, and Quality Control/Quality Assurance (QA/QC) services throughout the duration of this project that was completed without any safety or quality control incidents of any kind.

Removal of roof panels

Side panel removal
