Project Description

The San Francisco VA Campus had a need for the demolition and removal of two modular trailers located near the 43rd Avenue entrance that were at the end of their service lives. This entrance is a high-profile area and also serves as the primary entry to the hospital area and thus Sustainable Group took extensive efforts to protect the public and the grounds during demolition activities. The trailers were also on an elevated location confined by a retaining wall which impacted the means and methods of removal and required skill and provision for their safe removal. Specific elements of work included the provision of all equipment, materials, labor, and permitting to execute this project. Other elements of work included the removal of the structures and all associated debris from the site inclusive of any connected structures or foundational elements. Removed assets and materials then became the sole property of Sustainable Group and required proper disposal in accordance with all local, state and federal rules and regulations. Finally, the project required on site mitigation to include grading and reseeding of the vacated area.

Sustainable Group key personnel performed all elements of the work as well as on-site construction management, field superintendence, safety oversight, and Quality Control/Quality Assurance (QA/QC) services. The project was completed in only seven days without any safety or quality control incidents of any kind.

Existing trailers T-27 and T-28
